## FarmSmart Farming Systems Expo 2011

The 2011 edition of the FarmSmart Farming Systems Expo was another great success. A range of session issues with present and future crops were explored with those who attended. The expo event is meant to provide a practical hands-on extension to the winter FarmSmart Agricultural Conference

The purpose of these diagnostic days is to highlight current issues in crop and livestock production. This was done through creating and exploring “field issues” which provided participants with skills and knowledge needed to identify and solve problems as they become evident, or better yet, identify and correct issues before they become problems.

The FarmSmart Expo is a two day event, with the first day inviting farmers and agribusiness to the Elora Research Station of the University of Guelph. The participants are organized into small groups who rotate through a number of sessions that challenge them in problem solving current and obscure agronomic events that have been experienced in the field. The sessions also highlight new technologies and techniques.

The second day we welcome Ontario Rural Youth to Elora. In 2011~30 youth descended on Elora for a fun and exciting day of tours and hands on demonstrations. This year for the youth program we organized tours of neighboring farms and ag businesses who hosted interesting sessions at their locations.

Mark your 2012 calendars for Thursday and Friday July 12<sup>h</sup> and 13<sup>h</sup> when the FarmSmart Expo will return to the Elora Research Station. This year we will also be collaborating with the Ontario Forage Council, Wellington Soil and Crop Improvement Association and the University of Guelph to host the Ontario Forage Focus on Wed. July, 13<sup>th</sup>. Consult our event website to keep current with this and other associated events: <http://www.uoguelph.ca/farmsmart>
